

Progress on PodHawk 1.7

Posted by Peter on 4 July 2010

I hope to release PodHawk 1.7 before the end of July. Main features will be :

- >> a plugins architecture, which will make it easier to add optional new features to PodHawk without rewriting the core code, plus a first small group of plugins.
- >> support for the latest version (5.2) of the JW Player, and the new .zip based themes for the JW Player
- >> the PodHawk facility to send a tweet to Twitter whenever a new post goes on air will be rewritten to use "open authentication". This is essential, as in mid-August Twitter will stop support for the "basic authorisation" procedure used in PodHawk 1.6.
