

Welcome...

Posted by Peter on 24 January 2009

...to PodHawk.

PodHawk is a content management system specially designed for audio and video podcasters. Developed from the well-established LoudBlog software, PodHawk will manage your audio and video files, generate a full podcasting RSS feed, and allow you to present your postings on an attractive web-page. There is a choice of Flash players, so your listeners can listen to your masterworks straight from your site.

This site runs entirely on PodHawk, and shows a few of the things that PodHawk is capable of doing. You can read much more about PodHawk [here](#), and download PodHawk 1.62 [here](#).
